# Chemistry B 

## Mark Schemes for the Units

## June 2009

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, GCSEs, OCR Nationals, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new syllabuses to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Grade Thresholds ..... 21

## F331 Chemistry for Life

| Question |  |  | Expected Answers |  |  | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (a) | (i) |  protons neutrons electrons <br> ${ }^{14} \mathrm{C}$ 6 8 6 <br> ${ }^{12} \mathrm{C}$ 6 6 6 <br> one mark for each row |  |  | 2 | do not allow ecf for electrons based on proton number |
|  |  | (ii) | $\begin{aligned} & { }_{6}^{14} \mathrm{C} \longrightarrow{ }_{7}^{14} \mathrm{~N}+{ }_{-1}^{0} \mathrm{e} \\ & \text { correct } \beta \text { particle (either symbol)(1); } \\ & \text { rest correct (1); } \end{aligned}$ |  |  | 2 | must be beta decay to score <br> allow - $\beta$ on LHS <br> numbers on wrong side scores maximum 1 |
|  |  | (iii) | time taken for half(radioactive) isotope to decay / count rate to fall by half / mass / amount to decrease by half(1) ; |  |  | 1 | do not allow atom instead of isotope allow ‘substance’ (to decay by half etc) |
|  | (b) | (i) | Number of half <br> lives Time after death <br> of organism/years ${ }^{14} \mathrm{C}:{ }^{12} \mathrm{C}$ ratio/10-12 |  |  | 1 | all correct as in table to left for mark |
|  |  |  |  |  |  |  |  |
|  |  |  | 0 | 0 | 1.000 |  |  |
|  |  |  | 1 | 5730 | 0.500 |  |  |
|  |  |  | 2 | 11460 | 0.25(0) |  |  |
|  |  |  | 3 | 17190 | 0.125 |  |  |

| Question |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: |
|  | (ii) | correct plotting(1) ; <br> smooth curve(1) ; <br> (ii) Use the figures in the completed table to plot a decay curve for ${ }^{14} \mathrm{C}$ on the axes below. | 2 | plotting within the square <br> curve does not need to go through all points but must be 'sensible!' <br> not point to point straight lines <br> line must not become horizontal / rise after the final point <br> ecf on candidate values in table |
|  | (iii) | between 500 and $1000 \mathrm{yrs}(1)$; | 1 | check against graph if outside range (for ecf) |
| (c) |  | very short <br> not around in sufficient levels long enough to detect(AW) / burst of harmful radiation (1) ; <br> very long possible harm to patient/too little radiation to detect(1) ; | 2 | do not allow isotope finished / stopped; must be about diagnosis / detection / tracing allow 'not around long enough to be useful as a tracer' / decays too fast / quickly for use(AW) |
| (d) | (i) | (nuclear) fusion (1) ; | 1 | allow spelling errors |

| Question |  | Expected Answers | Marks | Additional Guidance |
| :--- | :--- | :--- | :---: | :--- |
|  | (ii) | ${ }_{1}^{1} \mathrm{H}+{ }_{1}^{2} \mathrm{H} \rightarrow{ }_{2}^{3} \mathrm{He}$ <br> $\mathrm{RHS}(1) ; \operatorname{LHS}(1) ;$ | con one mark for numbers on right <br> ignore gamma radiation |  |
|  | Total | $\mathbf{1 4}$ |  |  |

| Question |  |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | (a) | (i) | for elements yet to be discovered(1) ; | 1 | allow AW <br> allow "to line up elements with similar properties" |
|  |  | (ii) | new elements(1) ; <br> showed properties fitting in with group(1); | 2 | Showed properties / characteristics / chemistry predicted / fitted - for second mark <br> allow specific reference to a "new" element |
|  |  | (iii) | noble(inert) gases / group 0 / group 8 / VIII (1) ; | 1 | wrongly named group cons correct group number |
|  | (b) | (i) | Atomic / proton number(1) ; | 1 |  |
|  |  | (ii) | properties of some of the elements did not match up in Newlands(1) ; | 1 | allow "he didn't leave gaps" |
|  | (c) | (i) | goes up(rises) then goes down(falls) (1) ; | 1 | allow high to higher then drops / falls |
|  |  | (ii) | bonding: (one mark available) <br> metallic on left of period changing to covalent going right(1) ; may be combined with later marks <br> structure: (three marks available) <br> (giant) metallic at start(1) ; <br> giant / large molecular / covalent or network / lattice in middle(1) ; <br> (simple) molecular on right(1) ; | 4 | allow description using quoted elements eg $\mathrm{Li}, \mathrm{Be},(\mathrm{B})$ metallic. etc <br> allow 'carbon / C' for middle marking point |
|  | (d) |  | group 2 and period 4 (both needed) | 1 |  |
|  |  |  | Total | 12 |  |

| Question |  |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | (a) |  | fuel igniting too early / before or without spark/on compression(1); <br> can damage engine / loss of power / efficiency(1) ; | 2 | do not allow tendency to auto ignite do not allow causes knocking |
|  | (b) | (i) | any value between 0.218 and 0.300 inclusive(1); | 1 |  |
|  |  | (ii) | bond enthalpies decrease down group(1) ; <br> longer bonds weaker(1) ; ORA | 2 | allow from left to right <br> longer bonds give smaller bond enthalpies scores 2 |
|  | (c) | (i) | tetrahedral(1) ; 109 ${ }^{\circ}(1)$; | 2 | allow tetrahedron between 104 and $110^{\circ}$ |
|  |  | (ii) | four sets / pairs of electrons / areas of negative charge / electron density(AW)(1) ; <br> repel(1); <br> as far as possible/minimise electronic energy(1) ; (need not refer to electrons) | 3 | note do not need around central atom (in stem) <br> do not allow four sets / four pairs on own without qualification <br> repel must refer to electrons not bonds or atoms etc do not allow repel as much as possible |
|  | (d) | (i) | ```QWC - heterogeneous (1) ; spelling of word must be correct adsorption of reactants(1); bonds (in reactants) weaken and break(1); new bonds (in products) form(1) ; products diffuse off / desorbed / released from catalyst(1);``` | 5 | do not allow absorption but allow anything else which suggests "on the surface" <br> bonds between reactants break cons $3^{\text {rd }}$ mark <br> do not allow forms an intermediate <br> do not allow petrol as a named reactant |
|  |  | (ii) | poison blocks / coats / reduces surface of catalyst (AW) (1) ; reactants / other molecules cannot bond to surface(1); | 2 | allow poison binds irreversibly for 1st mark |
|  |  |  | Total | 17 |  |

| Question |  |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | (a) | (i) | aliphatic(1) ; unsaturated(1) ; | 2 |  |
|  |  | (ii) | (cyclo)alkene / C=C / carbon-carbon double bond(1) ; | 1 |  |
|  |  | (iii) | process (+17,578-23,524)(1); <br> answer with sign ecf (1) ; <br> -5946 scores 2 | 2 | +5946 scores 1 <br> 5946 without a sign scores zero |
|  |  | (iv) | bond enthalpies are for the gaseous state / not in standard state (1) ; <br> bond enthalpy values are averages(1) ; | 2 | no other reference to standard states / conditions |
|  |  | (v) | $\mathrm{M}_{\mathrm{r}}$ limonene $=136(1)$; <br> moles of limonene $=1 / 136(=0.007352)(1)$; <br> $3 \mathrm{sf}(1)$; $(0.00735) / 7.35 \times 10^{-3}$ scores all three | 3 | allow any 3sf if a calculation present. Answer must be consistent with calculation |
|  | (b) | (i) | ethanol(1) ; <br> alkene(1) ; <br> ether / alkoxyalkane(1) ; | 3 | not ethan-1-ol |
|  |  | (ii) | correct skeletal formula for branched six carbon alkane | 1 |   <br> N |
|  |  | (iii) | correct name from above (ecf on incorrect skeletal / structural formula) | 1 | 2-methylpentane 3-methylpentane 2,2-dimethylbutane 2,3-dimethylbutane allow methyl-2-pentane etc ignore dashes, commas etc |

| Question |  | Expected Answers | Marks | Additional Guidance |
| :---: | :--- | :--- | :--- | :---: | :--- |
| $\mathbf{( c )}$ | (i) | more molecules in products(1); | $\mathbf{2}$ | allow 'increase in number of moles' <br> allow exothermic reaction giving more kinetic energy for 1 <br> mark <br> more disorder/ways of arranging them(1); |
|  |  | nore ways of arranging atoms |  |  |

## F332 Chemistry of Natural Resources

| Question |  |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (a) |  | chlorine is volatile / a gas (1) ; <br> toxic / poisonous / causes respiratory diseases / choking gas (1) ; | 2 | do not allow harmful / irritant / dangerous instead of toxic. |
|  | (b) | (i) | ```(moles NaCl =) 100000 / 58.5 (= 1709) (1); moles Cl2 = 1/2 moles NaCl (1); volume }\mp@subsup{\textrm{Cl}}{2}{}=\mathrm{ moles }\mp@subsup{\textrm{Cl}}{2}{}\times24(=20513\mp@subsup{\textrm{dm}}{}{3})(1)``` | 3 | indication of halving mols of NaCl or doubling 58.5 $=117$ <br> allow any number of significant figures including 1 sf . <br> allow a volume of $20508 \mathrm{dm}^{3}$, which is obtained if the rounded up value for the moles of NaCl is used. |
|  |  | (ii) | 100\% atom economy (1) ; | 1 | ignore high atom economy <br> allow all products are useful <br> allow no waste products <br> ignore references to side reactions |
|  | (c) | (i) | Diaphragm cell: advantage <br> no environmental concerns / uses less electricity / uses less energy (1); <br> disadvantage <br> uses lots of steam / chlorine / $\mathrm{Cl}_{2}$ / product must be purified(1); | 2 |  |
|  |  | (ii) | the required transportation links are already there / skilled workforce lives locally / near to necessary raw materials / links to electricity / shared facilities / shared resources / easier to obtain planning permission / existing infrastructure / risks concentrated in one area(1) ; | 1 |  |

| Question |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: |
|  | (iii) | $2 \mathrm{Cl}^{-} \rightarrow \mathrm{Cl}_{2}+2 \mathrm{e}^{-}$or balanced with $1 / 2(2)$; | 2 | $\mathrm{Cl}^{-} \rightarrow \mathrm{Cl}_{2}$ (1) ; adding electrons and balancing (1); ignore state symbols <br> allow $2 \mathrm{Cl}^{-}-2 \mathrm{e}^{-} \rightarrow \mathrm{Cl}_{2}$ <br> $2^{\text {nd }}$ mark depends on 1 st |
|  | (iv) | $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{5}(1) ;$ | 1 | allow upper or lower case letters but numbers must be superscripts <br> allow $[\mathrm{Ne}] 3 s^{2} 3 p^{5}$ |
| (d) | (i) | $\mathrm{Cl}_{2}=0$ (1); $\mathrm{Cl}^{-}=-1(1)$; | 2 | do not allow 1 - |
|  | (ii) | ```reduction (1); gain of electrons / oxidation state has decreased (1);``` | 2 | allow oxidation state becomes more negative ignore redox mark independently |
|  | (iii) | chlorine is a more powerful / stronger / better oxidising agent / more oxidising (than bromine). ORA(1); | 1 | do not allow chlorine is more reactive than bromine. allow chlorine has a higher oxidising ability. |
|  | (iv) | making medicines / making flame retardants (1) ; | 1 | allow water purification, making agricultural chemicals (like bromomethane), making dyes / photography / making solvents. <br> allow testing for unsaturation or a stated laboratory use |

| Question | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| (e) | must have: <br> 1. instantaneous (dipole) - induced dipole bonds (underlined part must be correctly spelt) (1) ; <br> plus four out of: <br> 2. electron movements in the molecules create an uneven distribution of charge (1) ; <br> 3. a dipole is induced in a neighbouring molecule leading to attraction (1) ; <br> 4. intermolecular bonds are stronger in bromine $/ \mathrm{Br}_{2}$ ORA(1) ; <br> 5. bromine has more electrons (ORA) (1) ; <br> 6. more energy / higher temperature is needed to break intermolecular bonds in bromine ORA (1) ; | 5 | allow references to intermolecular forces, rather than intermolecular bonds. <br> 1. allow anywhere in answer allow van der Waals correctly spelt, ignoring capitals <br> 4. do not allow more / higher intermolecular bonds <br> 5. do not allow references to electron density. <br> 6. a clear statement referring to breaking the covalent bond in bromine cons this point. |
|  | Total | 23 |  |

| Question |  |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2 | (a) | (i) | white (1) ; | 1 | do not allow off white/cream/grey white ignore cloudy <br> ignore changes of colour on standing |
|  |  | (ii) | ```Ag equation (1); state symbols (1) ;``` | 2 | completely correct equation (i.e. without spectator ions) scores the first mark. <br> allow answer with multiples <br> mark state symbols separately - must have the idea of $(\mathrm{aq})+(\mathrm{aq}) \rightarrow(\mathrm{s})$ |
|  |  | (iii) | $\mathrm{Ag}_{2} \mathrm{SO}_{4}(1)$; | 1 | ignore brackets around $\mathrm{SO}_{4}$ |
|  | (b) | (i) | equilibrium (position) moves to left / towards reactants(1) ; <br> $\mathrm{HCO}_{3}{ }^{-}$(concentration) increases(1); | 2 | equilibrium moves to make more $\mathrm{HCO}_{3}{ }^{-}$gains both marks |
|  |  | (ii) | rate of forward reaction = rate of back reaction / reactants and products are formed at the same rate (1); <br> concentrations of reactants and products remain constant / closed system (1) ; | 2 | do not allow concentrations of reactants and products are the same / equal |
|  | (c) | (i) | intermolecular bonds in chloromethane are weaker ORA (1) ; | 1 | answer must be a comparison. <br> do not allow less/fewer for weaker <br> ignore references to specific types of intermolecular bond |

| Question |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: |
|  | (ii) | at least one intermolecular bond shown from Cl of one molecule to C of another (1) ; <br> C and Cl of each molecule shown with $\delta^{+} / \delta^{-}$charge (1); | 2 | intermolecular bond can be shown in other forms, but not as a solid line. <br> there must be $2 \delta^{+}$on 2 carbons and $2 \delta^{-}$on 2 chlorines ignore any $\delta^{+} / \delta^{-}$on hydrogen. |
|  | (iii) | permanent dipole-(permanent) dipole (1) ; | 1 | do not allow pd-pd |
|  | (iv) | $\begin{aligned} & 346 \times 1000(=346000)(1) ; \\ & \text { answer } / 6.02 \times 10^{23}=5.748 \times 10^{-19} \mathrm{~J}(1) ; \end{aligned}$ | 2 | allow 2 or more sig figs |
|  | (v) | ```answer to (c) (iv)/6.63 x 10-34 (1); evaluation of number divided by h(= 8.67\times10'4 Hz)(1); 3 sf (1);``` | 3 | award sf mark for an answer that is the correct 3sf value of a shown calculation. |
| (d) | (i) | $\mathrm{C}_{4} \mathrm{H}_{9} \mathrm{OH}+\mathrm{HCl} \rightarrow \mathrm{C}_{4} \mathrm{H}_{9} \mathrm{Cl}+\mathrm{H}_{2} \mathrm{O}$ (1) ; | 1 | allow answers with other structural forms for butan-1-ol and 1-chlorobutane. <br> ignore state symbols |
|  | (ii) | nucleophilic (1) ; <br> substitution (1) ; | 2 | allow answers indicated in other ways, such as circling. each additional underline cons a mark |
|  | (iii) | (shaking with) (sodium / potassium) hydrogencarbonate (solution) (1) ; | 1 | allow sodium / potassium hydrogen carbonate allow sodium / potassium carbonate |

| Question |  | Expected Answers | Marks | Additional Guidance |  |
| :---: | :--- | :--- | :--- | :---: | :--- |
| 3 | (a) | (i) | refining oil / generating electricity / processes in a <br> petrochemical plant / producing steel / heating limestone / <br> fermentation (1) ; | $\mathbf{1}$ | allow burning a fossil fuel provided it is the context of <br> another industrial activity eg in a factory <br> allow making cement <br> ignore deforestation |
| (ii) | any one pair from: <br> $\mathrm{NO} / \mathrm{NO}_{2} / \mathrm{NO}_{x} / \mathrm{SO}_{2} / \mathrm{SO}_{3} / \mathrm{SO}_{x}(1) ;$ <br> causes acid rain / causes breathing problems (1); <br> or <br> unburnt hydrocarbons / Carbon monoxide / $\mathrm{NO}_{x}(1) ;$ <br> causes smog (1); <br> or <br> CO $/ \mathrm{NO}_{x} / \mathrm{C}_{x} \mathrm{H}_{y}(1) ;$ <br> causes greenouse effect / global warming (1); <br> or <br> $\mathrm{NO}_{x} / \mathrm{SO}_{x} / \mathrm{CO} /$ aromatics (1); <br> causes toxic effects on humans (1); | A correct pollutant gas scores the first mark. The second <br> mark depends on the first. |  |  |  |

\begin{tabular}{|c|c|c|c|c|}
\hline \multicolumn{2}{|l|}{Question} \& Expected Answers \& Marks \& Additional Guidance \\
\hline (b) \& \& \begin{tabular}{l}
any five from: \\
(a) UV / visible from the Sun is absorbed by the Earth / heats the Earth(1); \\
(b) Earth radiates/emits IR (1) ; \\
(c) \(\mathrm{CO}_{2}\) absorbs \(\mathrm{IR}(1)\); \\
(d) which causes bonds to vibrate (more) (1) ; \\
(e) more \(\mathrm{CO}_{2}\) means more radiation is absorbed (1) ; \\
(f) this energy is transferred to KE that increases atmospheric temperature / molecules radiate IR that warms Earth / atmosphere (1) ; \\
QWC for connection of ideas: \\
Earth absorbing radiation or being warmed then Earth emitting radiation \\
or \\
\(\mathrm{CO}_{2}\) absorbs IR then bonds vibrate or \(\mathrm{CO}_{2}\) absorbs IR then energy is transferred to the atmosphere.
\end{tabular} \& 5

1 \& | (a) do not allow light or sunlight instead of UV / visible |
| :--- |
| (b) \& (c) allow long-wave or low frequency radiation, do not allow reflects IR. |
| (c) allow answers suggesting other radiations are absorbed by the $\mathrm{CO}_{2}$ |
| (c) and (e) allow 'greenhouse gases' for $\mathrm{CO}_{2}$ | <br>

\hline (c) \& (i) \& the ocean water is too deep to be disturbed by a rockslide / pressure under the ocean keeps the $\mathrm{CO}_{2}$ in place(1) ; \& 1 \& allow rock slides (of this type) don't occur in the ocean. <br>
\hline
\end{tabular}

| Question |  | Expected Answers | Marks | Additional Guidance |
| :--- | :--- | :--- | :--- | :---: | :---: |
| (ii) | any two from: <br> burn less fossil fuel (1) ; <br> named alternative power source (1) ; <br> less deforestation / plant more trees (AW) / more <br> photosynthesis (1) ; <br> reacting the $\mathrm{CO}_{2}$ with lime/other suitable named solid (1) ; <br> disposing of it in an old mine / well / other suitable disposal <br> site (1) ; | do not allow just fewer cars |  |  |
|  | Total | $\mathbf{1 2}$ |  |  |

| Question |  |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | (a) |  | addition (1) ; | 1 | do not allow additional ignore electrophilic and radical. do not allow nucleophilic. |
|  | (b) |  |  <br> (1) ; | 1 | ignore brackets and n <br> ignore ambiguous attachments and small errors in benzene structure. <br> do not allow more than one simplest repeat unit allow more displayed versions |
|  | (c) | (i) | (colour change) red / brown / orange / yellow (1) ; to colourless (1) ; | 2 | Any combination of these colours but no others do not allow "clear" instead of "colourless". answers like 'it turns colourless' gain 1 mark. |
|  |  | (ii) | carbocation (1) ; | 1 | allow carbonium ion. allow minor spelling error do not allow bromonium ion |
|  |  | (iii) | carbocation / intermediate 1 is attacked by nucleophiles / species carrying negative charge / $\mathrm{Br}^{-} / \mathrm{C} t$ (1) ; <br> both $\mathrm{Br}^{-}$and $\mathrm{C}{ }^{-}$attack carbocation / intermediate 1 (1); <br> attack by $\mathrm{Br}^{-}$gives compound $\mathrm{A} /$ Attack by $\mathrm{C} \tau$ gives compound B (1) ; | 3 | allow marks from suitable diagrams allow 'attract' for 'attack' provided it leads to a reaction. |
|  | (d) | (i) | $\mathrm{HBr} /$ hydrogen bromide / hydrobromic acid (1) ; | 1 | ignore state symbols |
|  |  | (ii) | (partially) positively charged/ electron deficient reagent (AW) (1) ; <br> bonds by accepting a pair of electrons (1) ; | 2 | ignore lone in lone pair |

| Question |  | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: | :---: |
|  | (iii) | water / steam (1); <br> phosphoric acid catalyst (1) ; <br> high temperature and pressure/300C and 60atm (1) ; | 3 | allow sulfuric acid instead of phosphoric acid ignore concentrations <br> ignore inert catalyst supports such as alumina allow temps 200-400C and pressure above 1atm do not give a mark for high temperature and pressure without water/steam |
| (e) | (i) | C to which the OH is joined is itself joined to two other $\mathrm{Cs} /$ one H on C to which OH is bonded/ 2 alkyl groups on C(1) ; | 1 | can refer to R groups. <br> allow "it" for OH <br> ignore OH in middle of chain |
|  | (ii) | any four from: <br> the oxidation produces a ketone/ propanone (1); <br> absorption within 1705 to $1725\left(\mathrm{~cm}^{-1}\right)(1)$; <br> shows presence of $\mathrm{C}=\mathrm{O}$ bond (1) ; <br> there is no peak/trough between 3200 to $3640\left(\mathrm{~cm}^{-1}\right)$ <br> (1) ; <br> indicating there is no $\mathrm{O}-\mathrm{H}$ bond (1) ; | 4 | allow 'around/approximately 1700 '. <br> accept one number from 1705 and 1725 <br> accept one number between 3200 and 3640 <br> allow 2 marks for correctly indicating the peak at 1720 due to $\mathrm{C}=\mathrm{O}$ on the IR spectrum <br> allow 2 marks for indicating that there is no peak at 3200 due to $\mathrm{O}-\mathrm{H}$ on the IR spectrum <br> ignore references to other peaks/troughs |
|  |  | Total | 19 |  |

\begin{tabular}{|c|c|c|c|c|}
\hline \multicolumn{2}{|l|}{Question} \& Expected Answers \& Marks \& Additional Guidance \\
\hline 5 \& (a) \& \begin{tabular}{l}
meaning: \\
splitting / breaking down a chemical / molecule / bond(1) ; \\
using energy absorbed from UV / visible / light(1) ; \\
example: \\
splitting of a water molecule by UV (radiation) (1) ;
\end{tabular} \& 3 \& \begin{tabular}{l}
The example quoted must be the one taken from the article (break-up of water by UV radiation). It can be represented by an equation. \\
the second mark can be scored in either part by mention of hv e.g. on the equation arrow
\end{tabular} \\
\hline \& (b) \& \begin{tabular}{l}
1. formation of oxygen atoms from dissociation of water by UV or dissociation of \(\mathrm{O}_{2}\) by UV / \(\mathrm{O}_{2} \rightarrow 2 \mathrm{O}(1)\); \\
2. oxygen atoms/radicals join to make \(\mathrm{O}_{2} / \mathrm{O}+\mathrm{O} \rightarrow \mathrm{O}_{2} / \mathrm{O}_{2}\) formed by photosynthesis (1); \\
3. \(\mathrm{O}_{2}\) plus O gives \(\mathrm{O}_{3} / \mathrm{O}_{2}+\mathrm{O} \rightarrow \mathrm{O}_{3}(1)\); \\
4. ozone is decomposed / \(2 \mathrm{O}_{3} \rightarrow 3 \mathrm{O}_{2} / \mathrm{O}_{3} \rightarrow \mathrm{O}_{2}+\mathrm{O}(1)\); \\
5. absorbs UV from sunlight (1); \\
QWC mark for connection of ideas: \\
idea of \(O\) atoms formed and then being used in another reaction
\end{tabular} \& 5

1 \& | allow $\mathrm{H}_{2} \mathrm{O} \rightarrow \mathrm{H}_{2}+\mathrm{O} / \mathrm{H}_{2} \mathrm{O} \rightarrow 2 \mathrm{H}+\mathrm{O}$ |
| :--- |
| UV or hv not needed. |
| allow 'photodissociation' instead of 'by UV'. |
| for full marks at least one of marking points 2,3 and 4 must be given as an equation. |
| allow frequency values in the range $1 \times 10^{15}$ to $1 \times 10^{17} \mathrm{~Hz}$ instead of UV. |
| mark independently | <br>

\hline \& (c) \& | converting both values to the same units ( $2 \mathrm{ppm}=$ $0.0002 \% / 20.948 \%=209480 \mathrm{ppm})(1)$; |
| :--- |
| dividing oxygen value by methane value (20.948/0.0002 or 209480/2 = 104740) (1) ; | \& 2 \& | allow 3 sf or more |
| :--- |
| mark independently | <br>

\hline
\end{tabular}

| Question | Expected Answers | Marks | Additional Guidance |
| :---: | :---: | :---: | :---: |
| (d) | $\mathrm{FeS}_{2}$ is oxidised (1); <br> $\mathrm{O}_{2}$ and $\mathrm{Fe}_{2} \mathrm{O}_{3} / \mathrm{FeO} / \mathrm{Fe}_{3} \mathrm{O}_{4}$ in an equation (1) ; <br> completely correct equation (1) ; $\begin{aligned} & 4 \mathrm{FeS}_{2}+11 \mathrm{O}_{2} \rightarrow 2 \mathrm{Fe}_{2} \mathrm{O}_{3}+8 \mathrm{SO}_{2} \\ & 3 \mathrm{FeS}_{2}+8 \mathrm{O}_{2} \rightarrow \mathrm{Fe}_{3} \mathrm{O}_{4}+6 \mathrm{SO}_{2} \\ & \mathrm{FeS}_{2}+2.5 \mathrm{O}_{2} \rightarrow \mathrm{FeO}+2 \mathrm{SO}_{2} \end{aligned}$ | 3 |  |
| (e) | the temperature in the troposphere decreases as you move away from the Earth's surface (1) ; <br> because hot gases near the Earth's surface rise \& cool / higher concentrations of greenhouse gases / named gas lower down absorb more IR from Earth / the atmosphere is heated by the Earth low down(1); <br> within the stratosphere the temperature of the atmosphere rises as you move away from the Earth (1) ; due to exothermic reactions (1) ; | 4 | mark independently <br> candidates can give figures for altitudes instead of troposphere / stratosphere |
| (f) | the concentration of gases is higher in the troposphere / troposphere is more dense / pressure is higher ORA (1) ; <br> so there are more collisions per second / more frequent collisions (in the troposphere) (1); | 2 | do not allow 'more collisions' or 'more chance of collisions' |
|  | Total | 20 |  |

## Grade Thresholds

## Advanced GCE Chemistry B (Salters) (H035 H435)

June 2009 Examination Series
Unit Threshold Marks

| Unit |  | Maximum <br> Mark | A | B | C | D | E | U |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| F331 | Raw | 60 | 47 | 42 | 37 | 32 | 27 | 0 |
|  | UMS | 90 | 72 | 63 | 54 | 45 | 36 | 0 |
| F332 | Raw | 100 | 69 | 60 | 51 | 43 | 35 | 0 |
|  | UMS | 150 | 120 | 105 | 90 | 75 | 60 | 0 |
| F333 | Raw | 60 | 51 | 46 | 41 | 37 | 33 | 0 |
|  | UMS | 60 | 48 | 42 | 36 | 30 | 24 | 0 |

## Specification Aggregation Results

Overall threshold marks in UMS (ie after conversion of raw marks to uniform marks)

|  | Maximum <br> Mark | A | B | C | D | E | U |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| H035 | 300 | 240 | 210 | 180 | 150 | 120 | 0 |

The cumulative percentage of candidates awarded each grade was as follows:

|  | A | B | C | D | E | U | Total Number of <br> Candidates |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{H 0 3 5}$ | 17.8 | 35.1 | 53.4 | 68.9 | 82.8 | 100.0 | 8931 |

## 8931 candidates aggregated this series

For a description of how UMS marks are calculated see:
