# A-level CHEMISTRY

Paper 1 Inorganic and Physical Chemistry

### Time allowed: 2 hours

#### Materials

For this paper you must have:

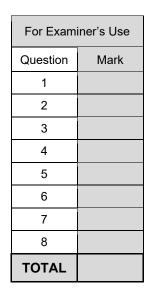

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

#### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

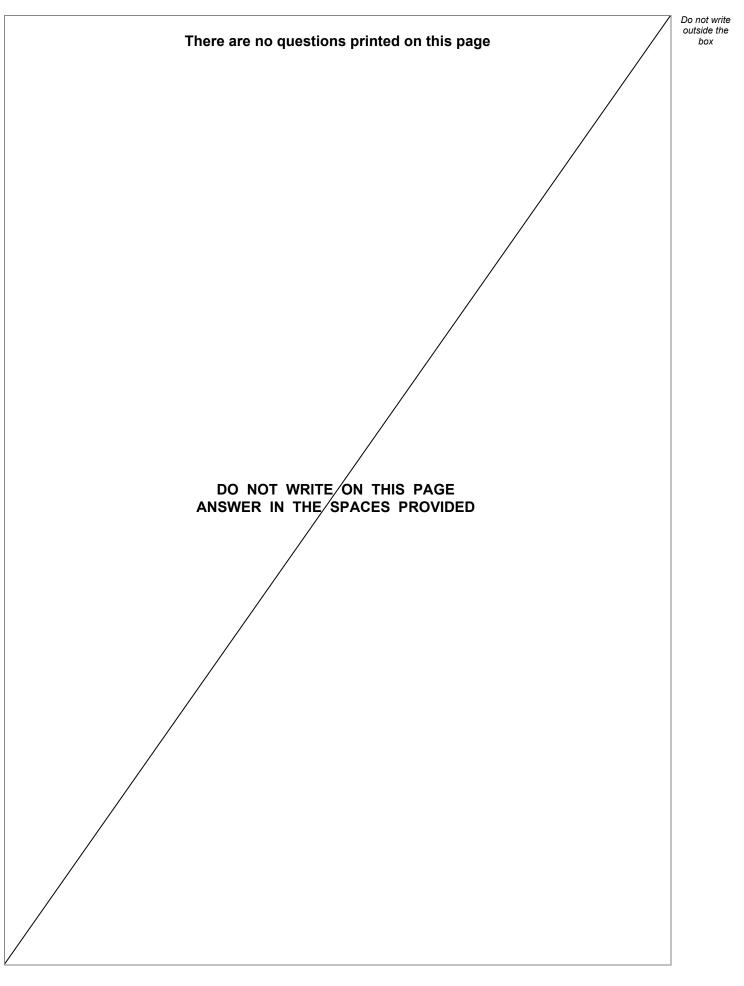

#### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 105.

	Answer <b>all</b> questions in the spaces provided.	Do not write outside the box
0 1	This question is about equilibria.	
0 1.1	Give <b>two</b> features of a reaction in dynamic equilibrium. [2 marks]	
	Feature 1	-
	Feature 2	-
01.2	A gas-phase reaction is at equilibrium. When the pressure is increased the yield of product decreases. State what can be deduced about the chemical equation for this equilibrium. [1 mark]	-
		-
	Question 1 continues on the next page

		Do not write
0 1.3	Carbon monoxide and hydrogen react to form methanol.	outside the box
	$CO(g) + 2H_2(g) \rightleftharpoons CH_3OH(g)$	
	0.430 mol of carbon monoxide is mixed with 0.860 mol of hydrogen. At equilibrium, the total pressure in the flask is 250 kPa and the mixture contains 0.110 mol of methanol.	
	Calculate the amount, in moles, of carbon monoxide present at equilibrium.	
	Calculate the partial pressure, in kPa, of carbon monoxide in this equilibrium mixture.	
	[3 marks]	
	Amount of carbon monoxide mol	
	Partial pressure kPa	
0 1.4	Give an expression for the equilibrium constant ( $K_{\rm p}$ ) for this reaction.	
	$CO(g) + 2H_2(g) \Rightarrow CH_3OH(g)$	
	[1 mark]	
	Kp

0 2	Rhenium has an atomic number of 75		Do no outsic bo
0 2.1	Define the term relative atomic mass.	[2 marks]	
0 2.2	The relative atomic mass of a sample of rhenium is 186.3		
	Table 2 shows information about the two isotopes of rhenium in this sampl         Table 2	e.	
	Relative isotopic mass Relative abundance	1	
	185 10	-	
	To be calculated 17	-	
	Show your working.	[2 marks]	
	Relative isotopic mass		
0 2.3	State why the isotopes of rhenium have the same chemical properties.	[1 mark]	

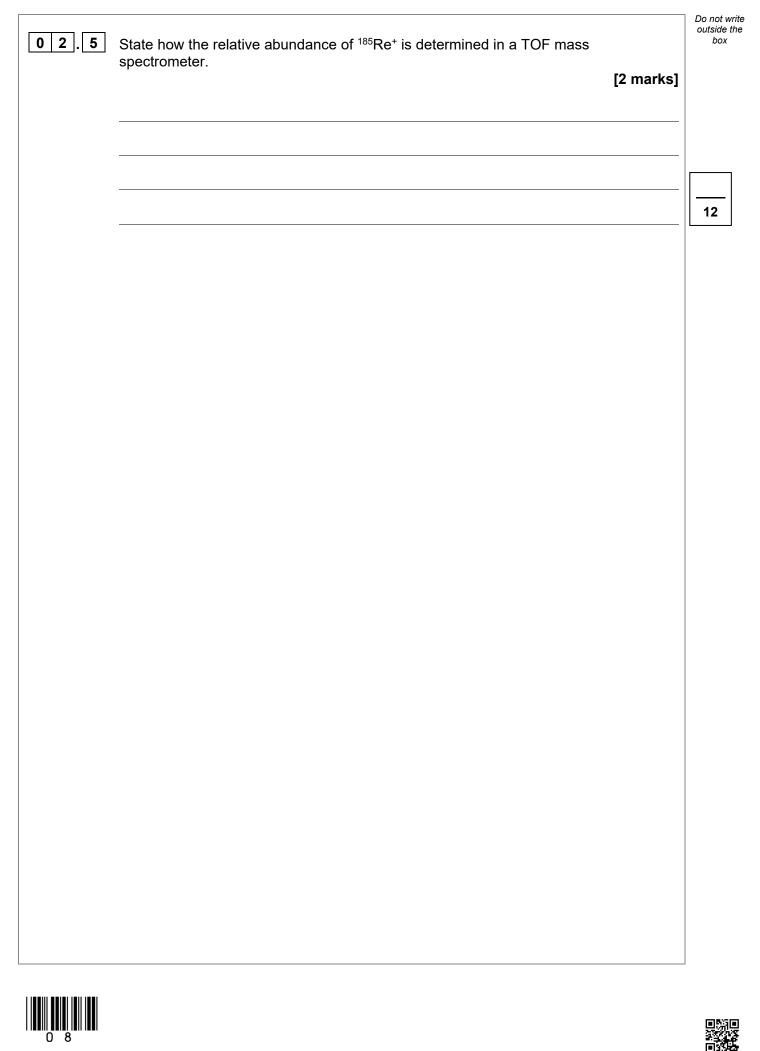

A sample of rhenium is ionised by electron impact in a time of flight (TOF) mass spectrometer. 0 2 . 4 A <sup>185</sup>Re<sup>+</sup> ion with a kinetic energy of 1.153 × 10<sup>-13</sup> J travels through a 1.450 m flight tube. The kinetic energy of the ion is given by the equation  $KE = \frac{1}{2}mv^2$ where m = mass / kg $v = \text{speed} / \text{m s}^{-1}$ KE = kinetic energy / J Calculate the time, in seconds, for the ion to reach the detector. The Avogadro constant,  $L = 6.022 \times 10^{23} \text{ mol}^{-1}$ [5 marks]

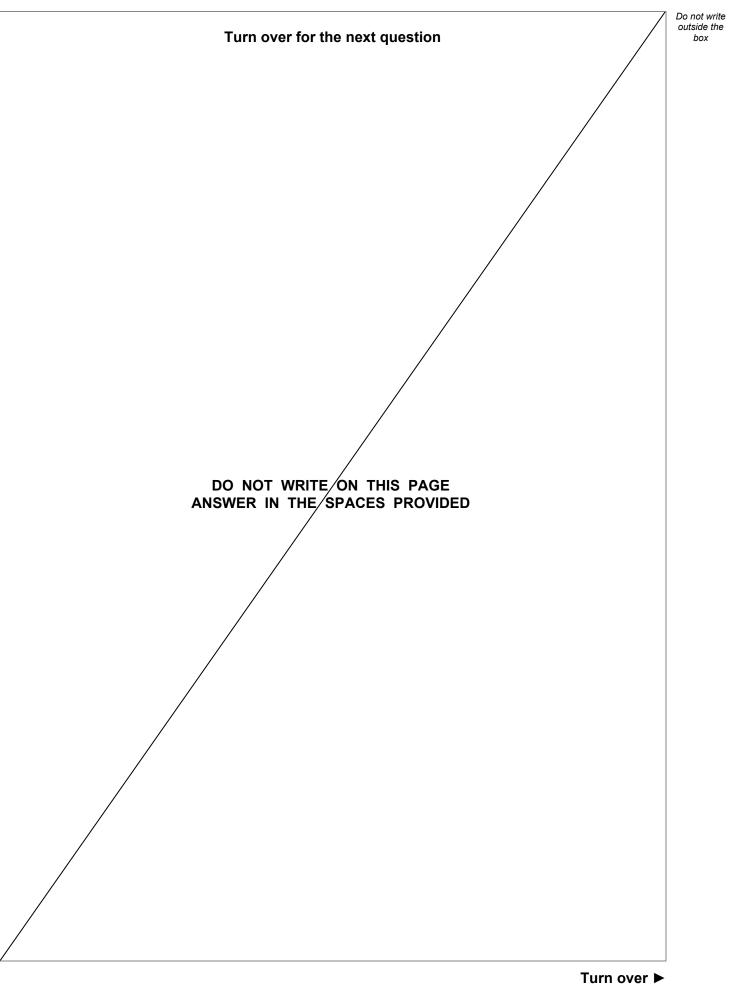

Do not write outside the box

0 3 This question is about hydrogen peroxide,  $H_2O_2$ The half-equation for the oxidation of hydrogen peroxide is  $H_2O_2 \rightarrow O_2 + 2H^+ + 2e^-$ Hair bleach solution contains hydrogen peroxide. A sample of hair bleach solution is diluted with water. The concentration of hydrogen peroxide in the diluted solution is 5.00% of that in the original solution. A 25.0 cm<sup>3</sup> sample of the diluted hair bleach solution is acidified with dilute sulfuric acid. This acidified sample is titrated with 0.0200 mol dm<sup>-3</sup> potassium manganate(VII) solution. The reaction is complete when 35.85 cm<sup>3</sup> of the potassium manganate(VII) solution are added. 0 3. 1 Give an ionic equation for the reaction between potassium manganate(VII) and acidified hydrogen peroxide. Calculate the concentration, in mol dm<sup>-3</sup>, of hydrogen peroxide in the original hair bleach solution. (If you were unable to write an equation for the reaction you may assume that the mole ratio of potassium manganate(VII) to hydrogen peroxide is 3:4 This is **not** the correct mole ratio.) [5 marks] mol dm⁻³ Concentration

03.2	State why an indicator is <b>not</b> added in this titration.	[1 mark]	Do not write outside the box
03.3	Give the oxidation state of oxygen in hydrogen peroxide.	[1 mark]	
03.4	Hydrogen peroxide decomposes to form water and oxygen. Give an equation for this reaction. Calculate the amount, in moles, of hydrogen peroxide that would be needed produce 185 cm <sup>3</sup> of oxygen gas at 100 kPa and 298 K The gas constant, <i>R</i> = 8.31 J K <sup>-1</sup> mol <sup>-1</sup> Equation	to [5 marks]	
	Amount	_ mol
